

Rainwater Harvesting

Onga WaterSwitch Automatic Rainwater Controller

H₂OInformer Display Features:

Tank savings (in ltr)

Mains savings (in ltr)

Percentage savings

Days of savings

WaterSwitch provides the best possible solution for urban rainwater harvesting. The WaterSwitch provides automatic selection between rainwater from a tank and water from mains. A seamless supply of water (tank or mains) is delivered to household demands such as toilet cistern filling, washing machines, garden watering and car washing.

WaterSwitch

- Automatically saves water
- Seamlessly switches between mains and rainwater tank
- Upon activation, solenoid valve prevents mixing of mains and tank water so genuine water savings are achieved
- Easy installation
- **H₂OInformer Special Feature:**
New state of the art, wireless interface module records water usage for both mains and tank water so you can see your actual water savings from up to a 20 metre range.

Applications:

- Use your rainwater for:
The washing machine, flushing the toilet, washing the car, watering the garden
